GALORA

Galora

Salon Management & Customer Booking Platform

Introduction: what is Galora?

One platform that connects salons and their customers.

- Salon teams run appointments, customers, billing and offers from one dashboard.
- Customers find a salon, pick services and book a time slot online.
- A Super Admin oversees every salon on the platform.

Website (React) + Mobile app (Expo)
One REST API | MongoDB database

Salon owners & staff

Manage the whole salon from one dashboard.

Customers

Discover salons, compare prices, book a slot.

Platform admin

Approve owners and monitor all salons.

Problem statement

Appointment clashes

Phone calls and paper diaries lead to double-booking and missed slots.

Scattered customer data

Names, visit history and spending sit in notebooks or chat apps.

Manual billing

Hand-written bills cause discount and tax mistakes; payments are hard to track.

Packages on paper

Session balances and membership discounts are easy to forget or dispute.

Customers cannot compare

No easy way to see nearby salons, prices and free time slots online.

The result

Time lost on paperwork, unhappy customers and missed repeat visits.

Project objectives

For salon owners

- Run bookings, customers and billing in one place
- Control who can see and change what (roles)
- Sell packages and memberships, track balances
- Publish the salon so customers can find it

For customers

- Find salons by city, area, service and price
- See services, prices and free time slots
- Book in a few taps, from web or mobile
- Know the booking status (pending, confirmed)

For the platform

- Approve new salon owners before access
- Suspend or activate salons when needed
- Keep a history of important actions (audit)

Existing system vs proposed system

Area	Existing (manual) system	Galora (proposed system)
Appointments	Phone calls, paper diary	**Online booking with live free slots**
Customer records	Notebooks, memory, chat apps	**Customer list with visits and total spend**
Billing	Hand-written bills	**Digital invoices, cash / UPI / card payments**
Packages & memberships	Paper cards, no balance check	**Plans with session balance and discount tracking**
Staff access	Everyone sees everything	**Owner, manager, receptionist, staff roles**
Finding a salon	Word of mouth	**Search by city, area, service, price, map**

Main features and their status

Salon discovery

Search by city, area, service, price; map view

Implemented

Appointment booking

Live free slots; pending to confirmed flow

Implemented

Customers

Visits, spend; new, regular, inactive

Implemented

Services

Price list, duration, at salon or at home

Implemented

Staff

Skills, working hours, active status

Implemented

Packages

Session bundles with a balance ledger

Implemented

Memberships

Plans with discounts and a ledger

Implemented

Billing

Invoices, cash / UPI / card, refunds

Implemented

Offers

Discounts on chosen services and dates

Implemented

Ratings & reviews

Rating filter and display are ready; customers cannot submit reviews yet

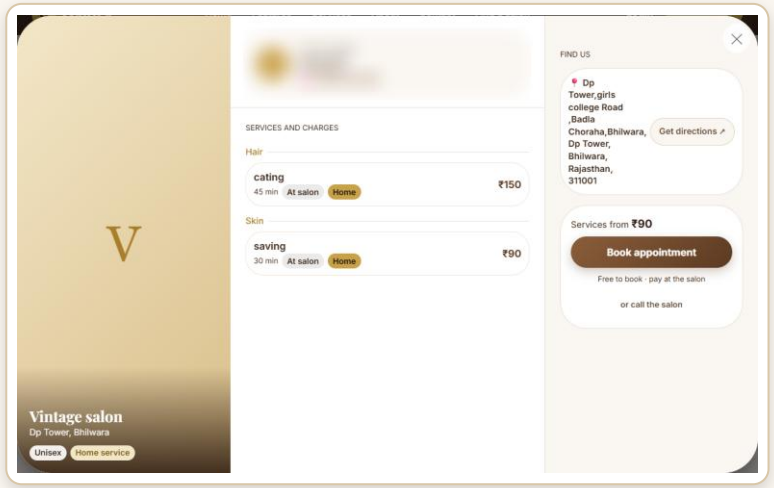

Planned

Also built: in-app notifications, audit history, team invitations and roles, contact inquiries, home-service option.

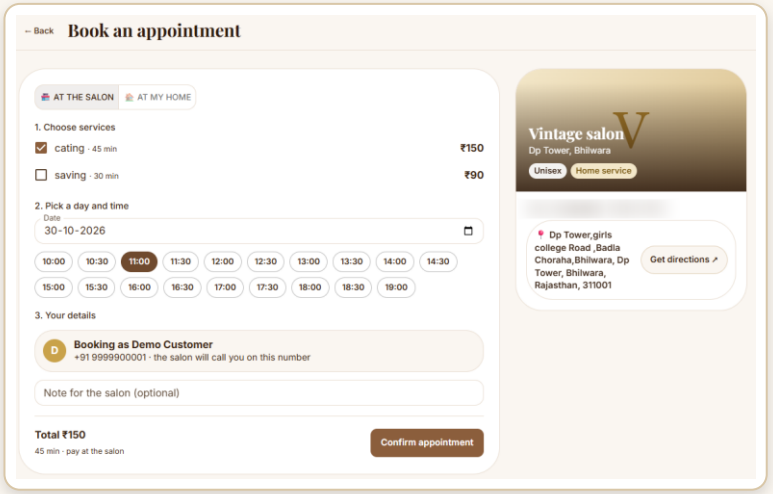

Customer workflow

Search salon → **Salon details** → **Select services** → **Book appointment** → **Booking status**

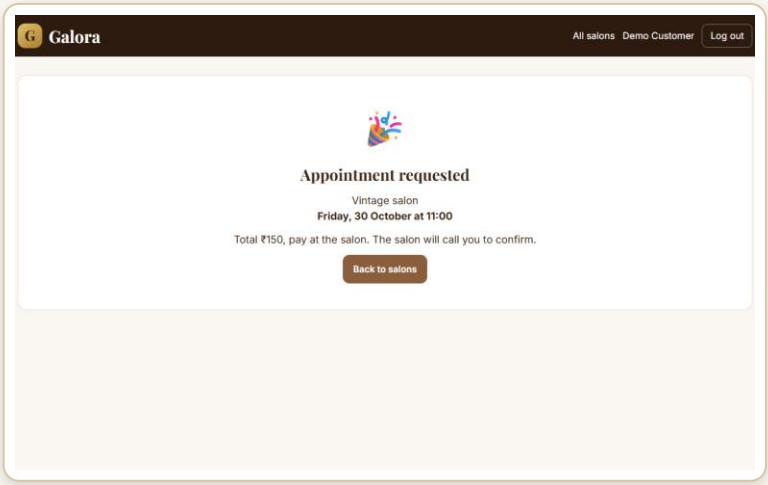

City, area, filters | Prices, map, offers | Pick services and a time slot | Login with a one-time code | Pending, then confirmed

2. Salon details and prices

3-4. Choose services and a slot

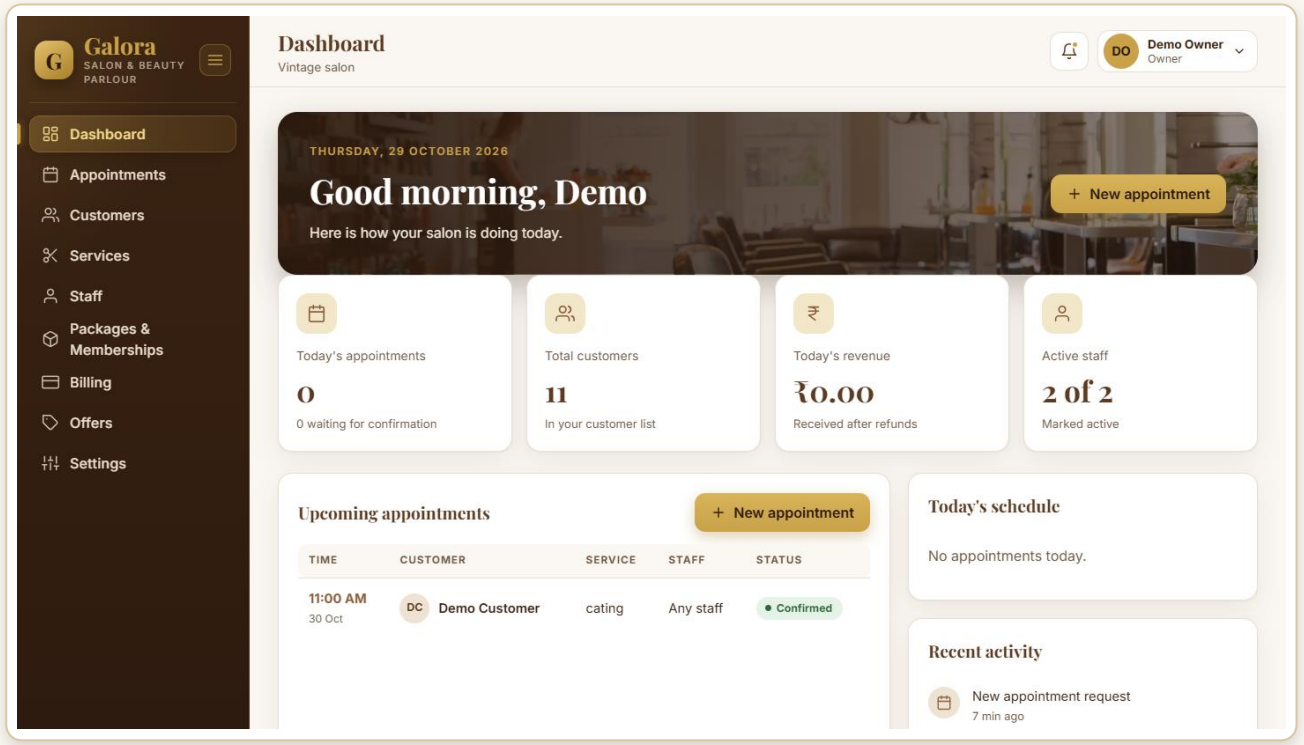

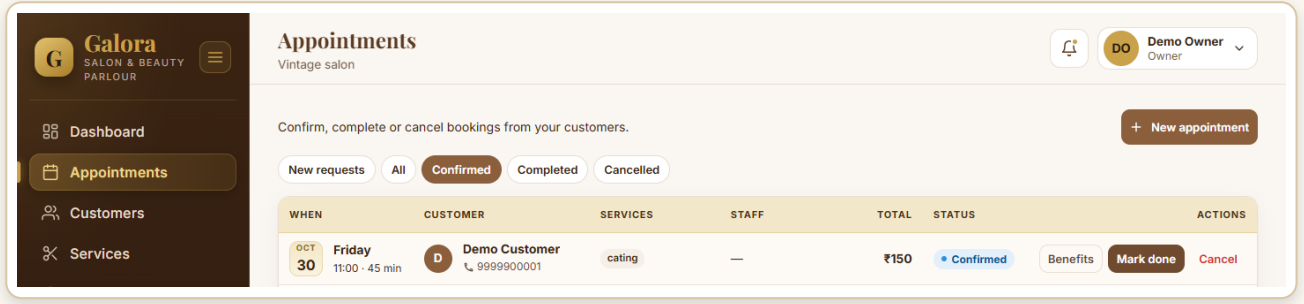

5. Request sent; owner confirms

Booking status: Pending → Confirmed → Completed → Cancelled

Owner confirms or declines from the dashboard.

Salon owner dashboard

Sidebar modules

- **Dashboard**
- Appointments
- Customers
- Services
- Staff
- Packages & Memberships
- Billing
- Offers
- Settings

Roles: Owner, Manager, Receptionist, Staff
Each role sees only the pages it is allowed to use.

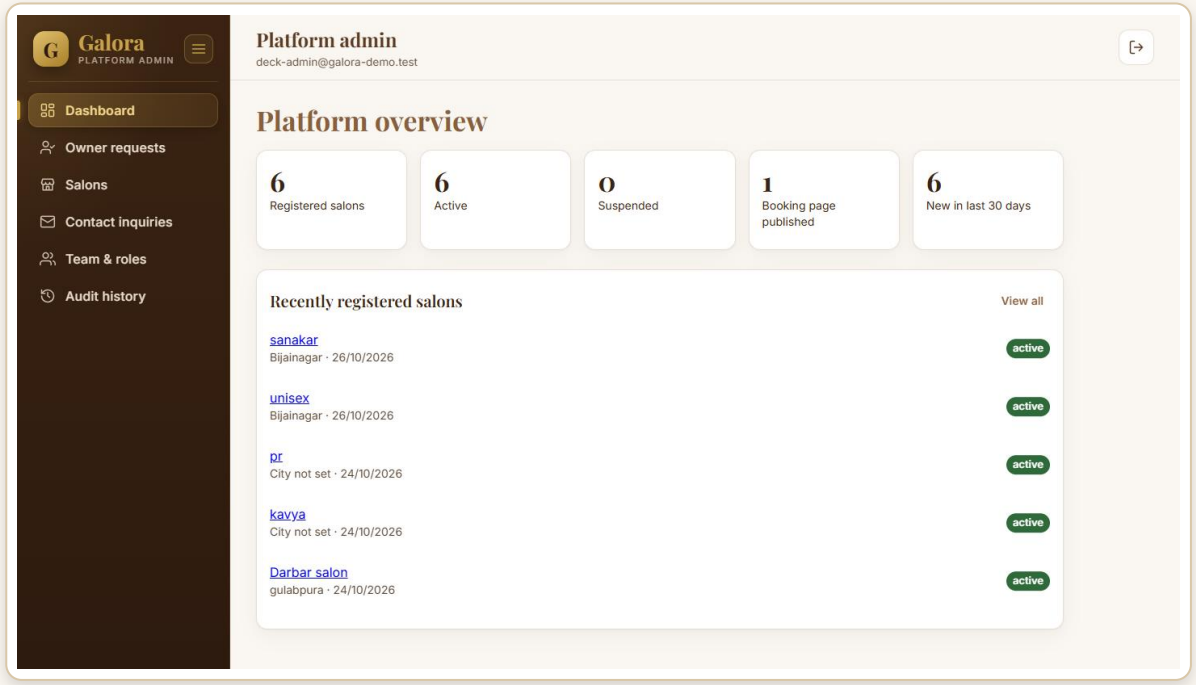

Platform admin (Super Admin)

Salon owner

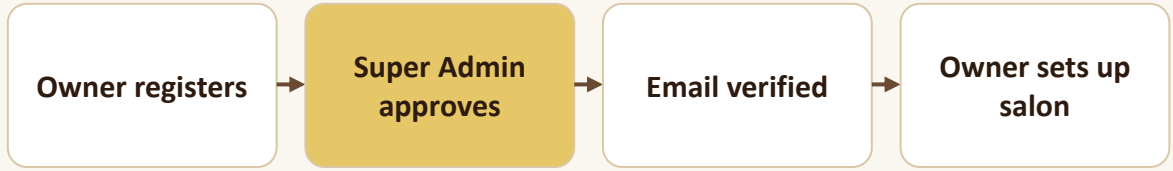

Works inside ONE salon: bookings, customers, billing, staff, offers.

Super Admin

- Sees ALL salons and platform numbers
- Approves or rejects new owner requests
- Creates salons; sets them active or suspended
- Reads contact inquiries and platform audit history

Owner sign-up flow

Technology stack

Frontend (website)

- React 19 + Vite 8
- Material UI (MUI 9)
- React Router, TanStack Query
- React Hook Form + Zod

Backend (API)

- Node.js + Express 5
- Mongoose 9 (ODM)
- JWT, bcrypt, Helmet
- Zod, rate limiting, Nodemailer

Database

- MongoDB
- Replica set for transactions
- 24 collections (Mongoose models)

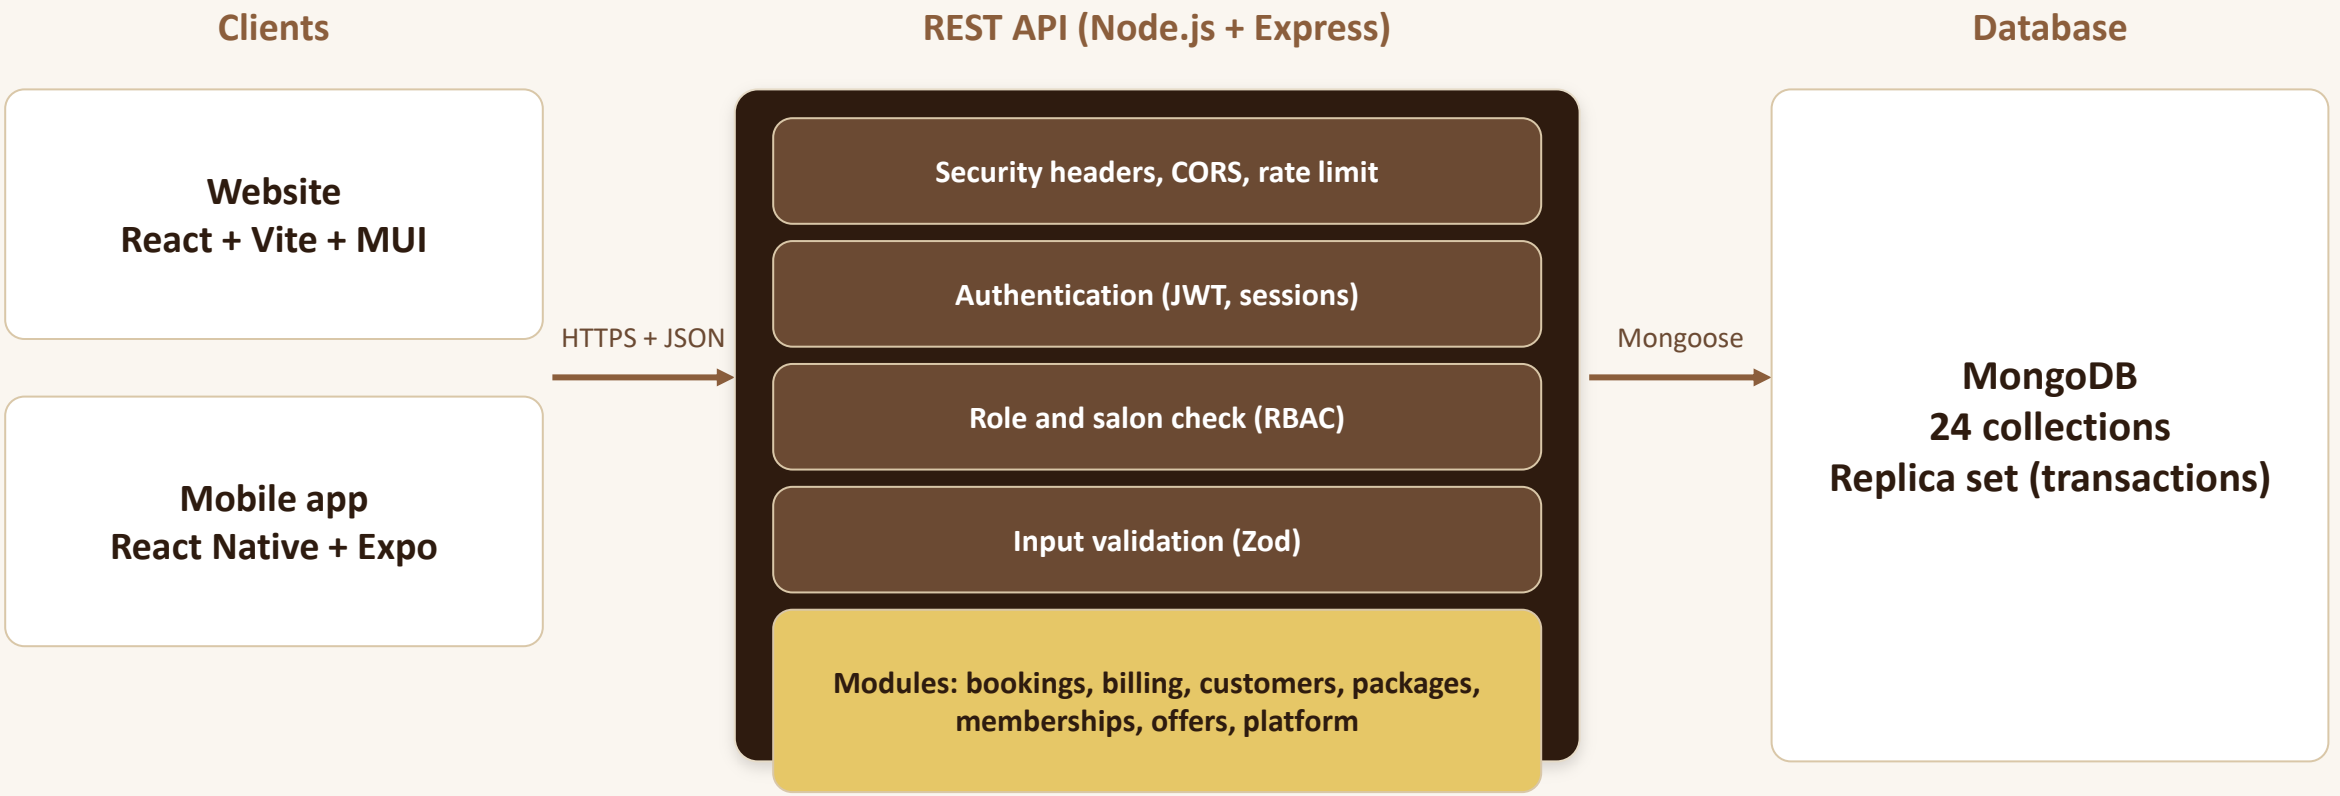

Mobile app

- React Native 0.88 + Expo 58
- React Navigation
- TanStack Query, shared REST API

Testing

- Node test runner + Supertest
- 137 backend tests, all passing

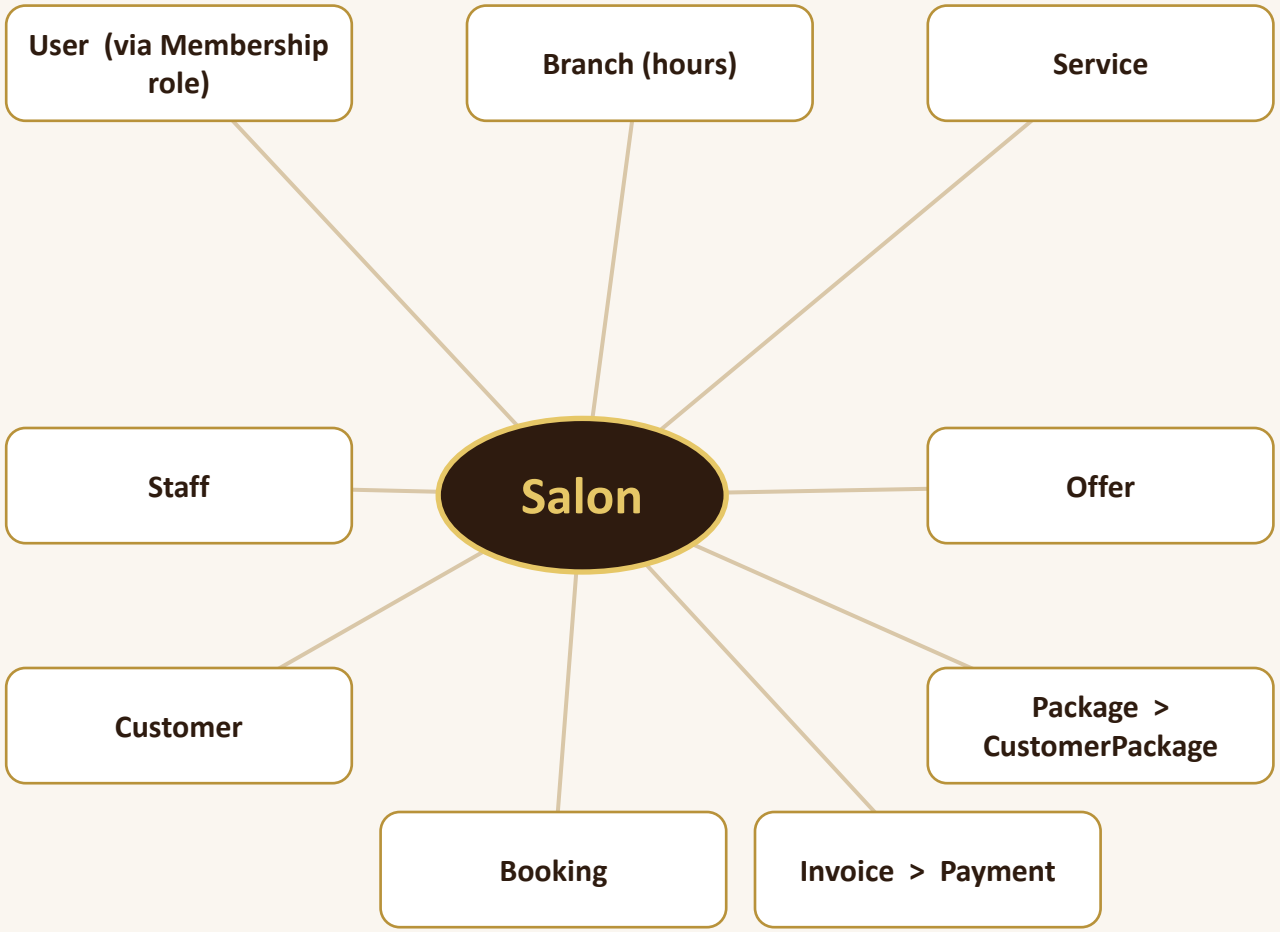

System architecture

The website and the mobile app share the same API.

Email (SMTP via Nodemailer) and SMS / OTP (Twilio adapter)
In development, codes are written to a local log instead of being sent.

Database design

Every record that belongs to a salon stores its salonId, so one salon never sees another salon's data.

24 collections in 7 groups

Core (6)
User, Salon, Branch, Membership, Session, VerificationToken

Catalogue (3)
Service, Staff, Offer

Customers & booking (3)
Customer, CustomerOtp, Booking

Packages (3)
Package, CustomerPackage, PackageLedger

Memberships (3)
MembershipPlan, CustomerMembership, MembershipLedger

Billing (3)
Invoice, Payment, InvoiceCounter

Operations (3)
Notification, AuditEvent, ContactInquiry

Security & authentication

1. **Login**
   Email + password (customers use a one-time code)

2. **Tokens**
   Access token (15 min) + refresh token (7 days, httpOnly cookie)

3. **Every API call**
   Check token, salon membership and role permission

4. **Validate**
   Zod checks all input before any database work

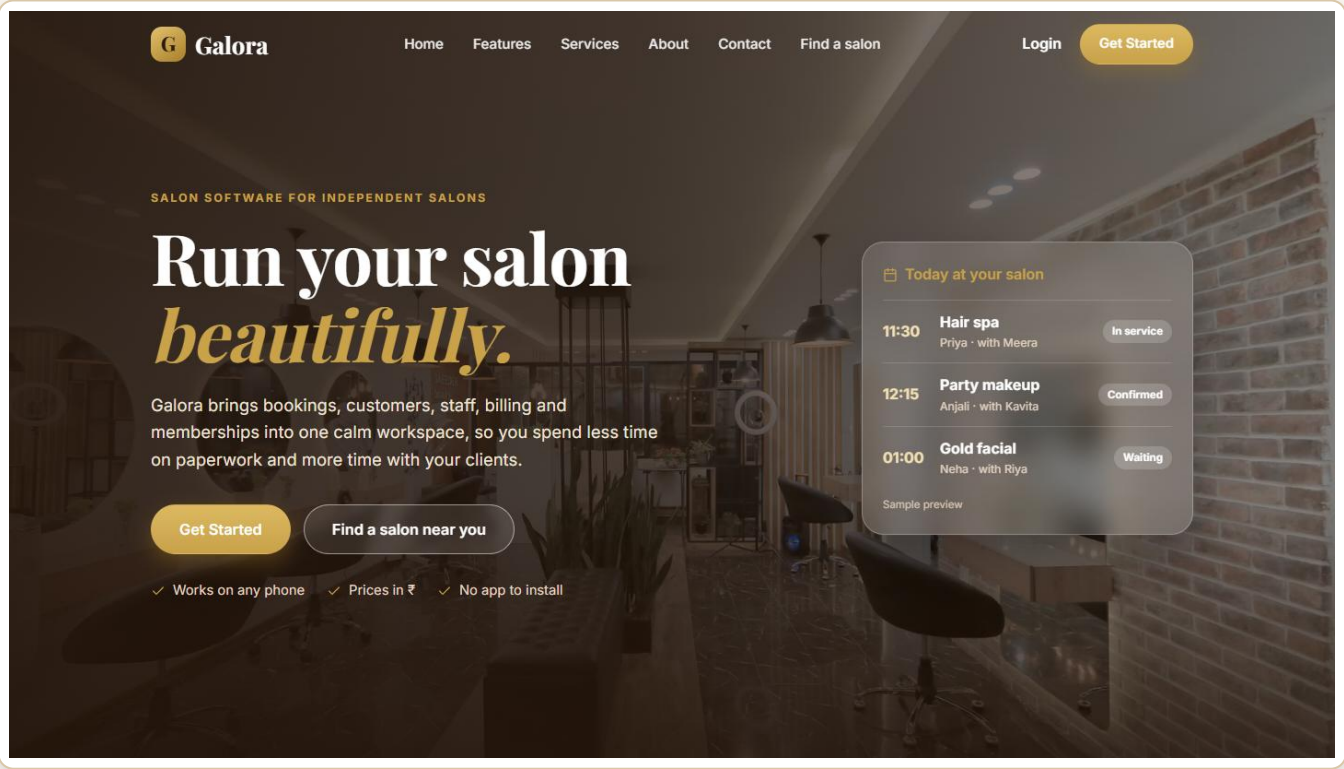

5. **Record**
   Important actions are saved in the audit history

Verified in the code

- ✓ Passwords hashed with bcrypt
- ✓ Login lock: 5 wrong tries lock the account for 15 minutes
- ✓ Role permission table (deny by default)
- ✓ Salon data separated per salon (tenant tests pass)
- ✓ Rate limiting, Helmet headers, single-origin CORS
- ✓ Secrets in .env; server refuses to start if config is invalid
- ✓ New owners need Super Admin approval

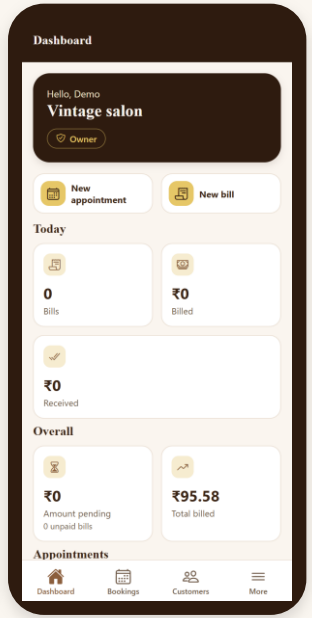

Before going live: turn on HTTPS (secure cookies) and connect real email / SMS providers.

Website and mobile application

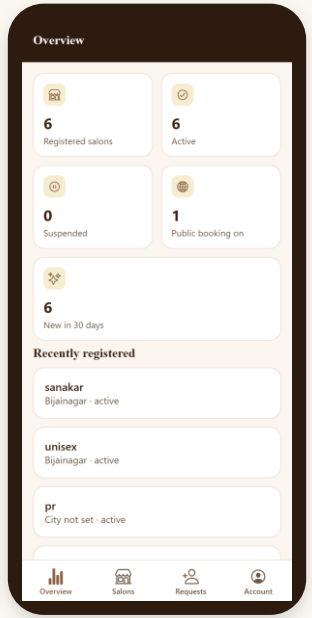

Customer home

Owner dashboard

Admin overview

Website: working

Landing page, salon search, customer booking, owner and admin dashboards.

Mobile app: in development

Customer, salon-team and admin screens run in Expo. Store release is pending.

Benefits and future scope

Benefits (available today)

- Online discovery helps customers find the salon
- Fewer clashes: customers see only free slots
- Packages, memberships and offers bring customers back
- Digital bills and customer history save time
- Roles keep staff access safe
- One platform for web and mobile

Future scope (planned, not built)

- **Ratings & reviews:** let customers rate after a visit
- **Online payments:** pay through a gateway (today: pay at salon)
- **Reminders:** SMS / email / push before appointments
- **Reports:** revenue and customer analytics
- **Mobile release:** publish the app to the stores
- **Customer bookings page** on the website (today on mobile only)

Conclusion

One connected platform

Customers, salon teams and the platform admin work on the same system.

Complete salon workflow

Discover, book, serve, bill and bring customers back with packages and offers.

Built with quality

Role-based security and 137 passing backend tests.

Galora helps salons spend less time on paperwork and more time with customers.
